Diagnostic Function Tests in Chemical Pathology P.T. Lascelles, D. Donaldson

This book is written for hospital doctors, nurses, biochemists, medical laboratory scientific officers and phlebotomists involved with the biochemical investigation of patients. It is hoped, also, that general practitioners and medical students will find it of help. Whilst the vast majority of biochemical tests assess the level of constituents in blood and urine at a given point in time, an important additional parameter is the assessment of physiological reserve function by means of loading tests, prolonged fasting, exercise and clearance studies. The protocol and interpretation of response of each of these stress tests form the main basis of the text. An attempt has been made to be reasonably comprehensive in the range of tests described; hence, not only have some rather older ones been retained, but also some very recently introduced ones included. It is appreciated that practice varies widely from laboratory to laboratory with respect to protocol, sample collection, methodology and quotation of reference ranges, and no doubt also from clinician to clinician, particularly regarding interpretation of results. In paediatric work, micromethods will demand much smaller volumes of blood than those stated here, which relate generally to adult medicine. The account, therefore, must be seen as a guide to practice rather than as a recipe; it is in no way an attempt to standardise procedures, which depend on the local requirements.
