Design and Verification of Microprocessor Systems for High-Assurance Applications

Microprocessors increasingly control and monitor our most critical systems, including automobiles, airliners, medical systems, transportation grids, and defense systems. The relentless march of semiconductor process technology has given engineers exponentially increasing transistor budgets at constant recurring cost. This has encouraged increased functional integration onto a single die, as well as increased architectural sophistication of the functional units themselves. Additionally, design cycle times are decreasing, thus putting increased schedule pressure on engineers. Not surprisingly, this environment has led to a number of uncaught design flaws. Traditional simulation-based design verification has not kept up with the scale or pace of modern microprocessor system design. Formal verification methods offer the promise of improved bug-finding capability, as well as the ability to establish functional correctness of a detailed design relative to a high-level specification. However, widespread use of formal methods has had to await breakthroughs in automated reasoning, integration with engineering design languages and processes, scalability, and usability.

This book presents several breakthrough design and verification techniques that allow these powerful formal methods to be employed in the real world of high-assurance microprocessor system design.

Pat Billings:

What do you ponder on book? It is just for students because they are still students or the idea for all people in the world, exactly what the best subject for that? Simply you can be answered for that question above. Every person has diverse personality and hobby for every other. Don't to be pressured someone or something that they don't desire do that. You must know how great along with important the book Design and Verification of Microprocessor Systems for High-Assurance Applications. All type of book are you able to see on many options. You can look for the internet solutions or other social media.

Glenn Pryor:

What do you regarding book? It is not important along? Or just adding material when you really need something to explain what you problem? How about your spare time? Every individual has many questions above. They should answer that question simply because just their can do this. It said that about book. Book is familiar on every person. Yes, it is right. Because start from on jardín de infancia until university need that Design and Verification of Microprocessor Systems for High-Assurance Applications to read.

Emma Anderson:

Information is provisions for anyone to get better life, information nowadays can get by anyone on everywhere. The information can be a knowledge or any news even an issue. What people must be consider whenever those information which is from the former life are hard to be find than now's taking seriously which one is suitable to believe or which one the actual resource are convinced. If you receive the unstable resource then you have it as your main information it will have huge disadvantage for you. All those possibilities will not happen inside you if you take Design and Verification of Microprocessor Systems for High-Assurance Applications as the daily resource information.

Pamela Jernigan:

Why? Because this Design and Verification of Microprocessor Systems for High-Assurance Applications is an unordinary book that the inside of the publication waiting for you to snap this but latter it will jolt you with the secret it inside. Reading this book alongside it was fantastic author who also write the book in such remarkable way makes the content on the inside easier to understand, entertaining method but still convey the meaning thoroughly. So , it is good for you because of not hesitating having this any longer or you going to regret it. This book will give you a lot of gains than the other book possess such as help improving your skill and your critical thinking way. So , still want to postpone having that book? If I have been you I will go to the book store hurriedly.
